**WHAT'S IN IT?**

Oligopeptide-Enzymatic Technology

BCAAs, or branched chain amino acids, assist in muscle recovery, boost endurance levels, and improve exercise performance. Amino acids are the building blocks of protein, so adding in some key BCAAs, or branched chain amino acids, to your diet has the potential to improve important bodily functions.<sup>†</sup>

Glutamine

Glutamine plays a major role in protein metabolism, which is when proteins are broken down to amino acids and then recycled in the body and used for energy. With metabolism enhancing qualities, Glutamine also helps breakdown fat and support muscle growth.<sup>†</sup>

Extreme Electrolyte & Hydration Matrix

Electrolytes are key in important bodily processes. Your blood pH levels, the amount of water retained in your body, and overall muscle functionality are affected by your electrolyte levels. Since you lose electrolytes through sweat, it's important to refuel with such to remain hydrated and able to get through a workout at full force.<sup>†</sup>

Liposomal Energy & Focus Matrix

This is the transport vehicle that distributes the important nutrients you are getting from BEST AMINOS™ W/ENERGY throughout your body. The matrix used in this performance powder provides you with a smooth flow of energy for longer periods of time and overall enhanced performance throughout the duration of your workout.<sup>†</sup>
